FCC and DOC Statement on Class B

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- · Reorient or relocate the receiving antenna.
- · Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio TV technician for help.

Notice:

- 1. The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- 2. Shielded interface cables must be used in order to comply with the emission limits.

About this Manual

This manual can be downloaded from the website, or acquired as an electronic file included in the optional CD/DVD. The manual is subject to change and update without notice, and may be based on editions that do not resemble your actual products. Please visit our website or contact our sales representatives for the latest editions.

Warrantv

- 1. Warranty does not cover damages or failures that arised from misuse of the product, inability to use the product, unauthorized replacement or alteration of components and product specifications.
- 2. The warranty is void if the product has been subjected to physical abuse, improper installation, modification, accidents or unauthorized repair of the product.
- 3. Unless otherwise instructed in this user's manual, the user may not, under any circumstances, attempt to perform service, adjustments or repairs on the product, whether in or out of warranty. It must be returned to the purchase point, factory or authorized service agency for all such work.
- 4. We will not be liable for any indirect, special, incidental or consequencial damages to the product that has been modified or altered.

Static Electricity Precautions

It is quite easy to inadvertently damage your PC, system board, components or devices even before installing them in your system unit. Static electrical discharge can damage computer components without causing any signs of physical damage. You must take extra care in handling them to ensure against electrostatic build-up.

- 1. To prevent electrostatic build-up, leave the system board in its anti-static bag until you are ready to install it.
- 2. Wear an antistatic wrist strap.
- 3. Do all preparation work on a static-free surface.
- 4. Hold the device only by its edges. Be careful not to touch any of the components, contacts or connections.
- 5. Avoid touching the pins or contacts on all modules and connectors. Hold modules or connectors by their ends.

Important:

Electrostatic discharge (ESD) can damage your processor, disk drive and other components. Perform the upgrade instruction procedures described at an ESD workstation only. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the system chassis. If a wrist strap is unavailable, establish and maintain contact with the system chassis throughout any procedures requiring ESD protection.

Safety Measures

- To avoid damage to the system, use the correct AC input voltage range.
- To reduce the risk of electric shock, unplug the power cord before removing the system chassis cover for installation or servicing. After installation or servicing, cover the system chassis before plugging the power cord.

About the Package

The package contains the following items. If any of these items are missing or damaged, please contact your dealer or sales representative for assistance.

- One CS103 board
- One COM port cable (Length: 250mm, 1 DB9 port)
- One Serial ATA data with power cable (Length: 300mm)
- One I/O shield

The board and accessories in the package may not come similar to the information listed above. This may differ in accordance with the sales region or models in which it was sold. For more information about the standard package in your region, please contact your dealer or sales representative.

Optional Items

- USB 2.0 cable
- COM cable
- SATA cable
- Thernal Solution (Heat sink and fan)
- I/O Shield

The board and accessories in the package may not come similar to the information listed above. This may differ in accordance with the sales region or models in which it was sold. For more information about the standard package in your region, please contact your dealer or sales representative.

Before Using the System Board

When installing the system board in a new system, you will need at least the following internal components.

- CPU
- Memory module
- Storage device such as hard disk drive, CD-ROM, etc.
- Power adaptor

External system peripherals may also be required for navigation and display, including at least a keyboard, a mouse and a video display monitor.

Chapter 1 - Introduction

► Specifications

CS103-Q370/C246

SYSTEM	Processor	Intel® Processors, LGA 1151 Socket, TDP up to 65W 9th Generation: Core i7-9700TE (Core 8; Max speed 3.8GHz; TDP 35W) Core i5-9500E (Core 6; Max speed 4.2GHz; TDP 65W) Core i3-9500TE (Core 6; Max speed 3.6GHz; TDP 35W) Core i3-9100E (Core 4; Max speed 3.7GHz; TDP 65W) Core i3-9100TE (Core 4; Max speed 3.2GHz; TDP 35W) 8th Generation: Core™ i7-8700 (Core 6; Max speed 4.6GHz; TDP 35W) Core™ i7-8700T (Core 6; Max speed 4.0GHz; TDP 35W) Core™ i5-8500 (Core 6; Max speed 4.1GHz; TDP 35W) Core™ i5-8500 (Core 6; Max speed 3.5GHz; TDP 35W) Core™ i3-8100 (Core 4; Max speed 3.6GHz; TDP 35W) Core™ i3-8100 (Core 4; Max speed 3.1GHz; TDP 35W) Pentium G5400 (Core 2; Max speed 3.1GHz; TDP 54W)
	Memory	Two 260-pin SODIMM up to 32GB Dual Channel DDR4 2666MHz (C246 support ECC)
	Chipset	Intel® Q370/C246 Chipset
	BIOS	AMI SPI 128Mbit
GRAPHICS	Controller	Intel® UHD Graphics 630 (only Pentium G5400, Celeron G4900 support 610)
	Feature	OpenGL 4.4, DirectX 12, OpenCL 2.1 HW Decode: AVC/H.264, MPEG2, VC1/WMV9, JPEG/MJPEG, HEVC/H265, VP8, VP9 HW Encode: AVC/H.264, MPEG2, JPEG, HEVC/H265, VP8, VP9
	Display	1 x LVDS 2 x DP++ LVDS: resolution up to 1920x1200 @ 60Hz DP1.2: resolution up to 4096x2304 @ 60Hz
	Triple Displays	DP++ +DP++ + LVDS
EXPANSION	Interface	1 x PCle x4 (Gen 3) 2 x DFl proprietary extension bus for PCle/PCl expansion 1 x M.2 2280 M Key (PCle x4, Gen3) 1 x M.2 2230 E Key (USB/PCle)
AUDIO	Audio Codec	Realtek ALC888 (Co-lay ALC887-VD2-CG)
ETHERNET	Controller	1 x Intel® I219LM PHY 1 x Intel® I211AT PCIe (10/100/1000Mbps)

REAR I/O	Ethernet	2 x GbE (RJ-45)
	USB	4 x USB 3.1 Gen2 Type A Connector
	Display	2 x DP++
INTERNAL I/O	Serial	2 x RS-232/422/485 (2.0mm pitch) 2 x RS-232 (2.0mm pitch)
	Display	1 x LVDS Connector
	Audio	1 x Front Audio
	SATA	2 x SATA 3.0 (up to 6Gb/s) 1 x SATA Power
	DIO	1 x 8-bit DIO
	SMBus	1 x SMBus
	USB	4 x USB 2.0
WATCHDOG TIMER	Output & Inter- val	System Reset, Programmable via Software from 1 to 255 Seconds
SECURITY	ТРМ	dTPM 2.0
POWER	Туре	9-36V DC-in
	Connector	DC jack colay 4 pins power connector (opt.)
	RTC Battery	CR2032 Coin Cell
OS SUPPORT	Microsoft Linux	Windows 10 IoT Enterprise 64-bit Linux
ENVIRONMENT	Temperature	Operating: -5°C~65°C Storage: -40 to 85°C
	Humidity	Operating: 5 to 90% RH Storage: 5 to 90% RH
MECHANICAL	Dimensions	Mini-ITX Form Factor: 170mm (6.7") x 170mm (6.7")
	Height	PCB: 1.6mm, Top Side: 20mm, Bottom Side: 3mm

The specifications listed here may be based on editions that do not resemble your actual products. Please visit the download page at go.dfi. datasheet.

Specifications

CS103-H310

SYSTEM	Processor	Intel® Processors, LGA 1151 Socket, TDP up to 65W 9th Generation: Core i7-9700TE Processor (Core 8; Max speed 3.8GHz; TDP 35W) Core i5-9500E Processor (Core 6; Max speed 4.2GHz; TDP 65W) Core i3-9500TE Processor (Core 6; Max speed 3.6GHz; TDP 35W) Core i3-9100E Processor (Core 4; Max speed 3.7GHz; TDP 65W) Core i3-9100TE Processor (Core 4; Max speed 3.2GHz; TDP 35W) 8th Generation: Core™ i7-8700 Processor (Core 6; Max speed 4.6GHz; TDP 65W) Core™ i7-8700T Processor (Core 6; Max speed 4.0GHz; TDP 65W) Core™ i5-8500 Processor (Core 6; Max speed 4.1GHz; TDP 65W) Core™ i5-8500T Processor (Core 6; Max speed 3.5GHz; TDP 65W) Core™ i3-8100 Processor (Core 4; Max speed 3.6GHz; TDP 65W) Core™ i3-8100 Processor (Core 4; Max speed 3.1GHz; TDP 65W) Core™ i3-8100 Processor (Core 2; Max speed 3.7GHz; TDP 58W) Celeron G4900 Processor (Core 2; Max speed 3.1GHz; TDP 54W)

The specifications listed here may be based on editions that do not resemble your actual products. Please visit the download page at <u>go.dfi.</u> (Com/CS103-H310, or via the QR code to the right for the latest datasheet. sheet.

Features

Watchdog Timer

The Watchdog Timer function allows your application to regularly "clear" the system at the set time interval. If the system hangs or fails to function, it will reset at the set time interval so that your system will continue to operate.

DDR4

DDR4 delivers increased system bandwidth and improves performance. The advantages of DDR4 provide an extended battery life and improve the performance at a lower power than DDR3/DDR2.

Graphics

The integrated Intel[®] UHD graphics engine delivers an excellent blend of graphics performance and features to meet business needs. It provides excellent video and 3D graphics with outstanding graphics responsiveness. These enhancements deliver the performance and compatibility needed for today's and tomorrow's business applications.

Serial ATA

Serial ATA is a storage interface that is compliant with SATA 1.0a specification. With speed of up to 6Gb/s (SATA 3.0), it improves hard drive performance faster than the standard parallel ATA whose data transfer rate is 100MB/s.

Gigabit LAN

The Intel^ I219LM and Intel^ I211AT Gigabit Ethernet Controllers support data transmission at 1Gbps.

Audio

The Realtek ALC887 audio codec provides 7.1 channel High Definition audio output.

Wake-On-LAN

This feature allows the network to remotely wake up a Soft Power Down (Soft-Off) PC. It is supported via the onboard LAN port or via a PCI LAN card that uses the PCI PME (Power Management Event) signal. However, if your system is in the Suspend mode, you can power-on the system only through an IRQ or DMA interrupt.

Wake-On-USB

This function allows you to use a USB keyboard or USB mouse to wake up a system from the S3 (STR - Suspend To RAM) state.

ACPI STR

The system board is designed to meet the ACPI (Advanced Configuration and Power Interface) specification. ACPI has energy saving features that enables PCs to implement Power Management and Plug-and-Play with operating systems that support OS Direct Power Management. ACPI when enabled in the Power Management Setup will allow you to use the Suspend to RAM function.

With the Suspend to RAM function enabled, you can power-off the system at once by pressing the power button or selecting "Standby" when you shut down Windows® without having to go through the sometimes tiresome process of closing files, applications and operating system. This is because the system is capable of storing all programs and data files during the entire operating session into RAM (Random Access Memory) when it powers-off. The operating session will resume exactly where you left off the next time you power-on the system.

Power Failure Recovery

When power returns after an AC power failure, you may choose to either power-on the system manually or let the system power-on automatically.

USB

The system board supports the new USB 3.1 Gen 2. It is capable of running at a maximum transmission speed of up to 10 Gbit/s (1.2 GB/s) and is faster than USB 3.1 Gen 1 (5 Gbit/s, or 625 MB/s), USB 2.0 (480 Mbit/s, or 60 MB/s) and USB 1.1 (12Mb/s). USB 3.1 reduces the time required for data transmission, reduces power consumption, and is backward compatible with USB 2.0. It is a marked improvement in device transfer speeds between your computer and a wide range of simultaneously accessible external Plug and Play peripherals.

RTC Timer

The Real Time Clock (RTC) installed on the system board allows your system to automatically power-on on the set date and time.

Chapter 2 - Hardware Installation

Board Layout

Specifications of these components are model-specific. Please refer to the specifications for detail.

Important:

Electrostatic discharge (ESD) can damage your board, processor, disk drives, add-in boards, and other components. Perform installation procedures at an ESD workstation only. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the system chassis. If a wrist strap is unavailable, establish and maintain contact with the system chassis throughout any procedures requiring ESD protection.

Standby Power LED

Important:

When the Standby Power LED lights up, it indicates that there is power on the system board. Power-off the PC then unplug the power cord prior to installing any devices. Failure to do so will cause severe damage to the motherboard and components.

System Memory

System Memory

Installing the SO-DIMM Module

Before installing the memory module, please make sure that the following safety cautions are well-attended.

- 1. Make sure the PC and all other peripheral devices connected to it has been powered down.
- 2. Disconnect all power cords and cables.
- 3. Locate the SO-DIMM socket on the system board
- 4. Make sure the notch on memory card is aligned to the key on the socket.

The system board supports the following memory interface.

Single Channel (SC)

Data will be accessed in chunks of 64 bits from the memory channels.

Dual Channel (DC)

Data will be accessed in chunks of 128 bits from the memory channels. Dual channel provides better system performance because it doubles the data transfer rate.

Single Channel	DIMMs are on the same channel. DIMMs in a channel can be identi- cal or completely different. However, we highly recommend using identical DIMMs. Not all slots need to be populated.
Dual Channel	DIMMs of the same memory configuration are on different channels.

Features

- Two 260-pin SODIMM, up to 32GB
- Dual Channel DDR4 2666MHz
- C246 supports ECC

Please follow the steps below to install the memory card into the socket.

Step 1:

Insert the memory card into the slot while making sure 1) the notch and the key are aligned, and 2) the non-connector end rises approximately 45 degrees horizontally. Press the card firmly into the socket while applying and maintaining even pressure on both ends.

Step 2:

Press the end of the card far from the socket down while making sure the retention notch and the clip align as indicated by the dotted line in the illustration. If the retention notch and the clip do not align, please remove the card and re-insert it. Press the card all the way down.

Step 3:

The clips snap automatically and abruptly to the retention notches of the card sounding a distinctive click, and lock the card in place. Inspect that the clip sits in the notch. If not, please pull the clips outward, release and remove the card, and mount it again.

► CPU

The system board is equipped with a surface mount LGA 1151 socket. This socket is exclusively designed for installing a LGA 1151 packaged Intel CPU.

Important:

1. Before you proceed, make sure (1) the LGA 1151 socket comes with a protective cap, (2) the cap is not damaged and (3) the socket's contact pins are not bent. If the cap is missing or the cap and/or contact pins are damaged, contact your dealer immediately.

2. Make sure to keep the protective cap. RMA requests will be accepted and processed only if the LGA 1151 socket comes with the protective cap.

No The

Note:

The system board used in the following illustrations may not resemble the actual board. These illustrations and photos are for reference only.

Installing the CPU

- 1. Make sure the PC and all other peripheral devices connected to it have been powered down.
- 2. Disconnect all power cords and cables.

3. Locate the LGA 1151 CPU socket on the system board.

Important:

The CPU socket must not come in contact with anything other than the CPU. Avoid unnecessary exposure. Remove the protective cap only when you are about to install the CPU.

 Unlock the socket by pressing the load lever down, moving it sideways until to escape the retention tab. Lift the load lever up when it's released.

► CPU ► Installing the CPU

5. Lift the load lever and the load plate all the way up as shown in the photo.

 Remove the protective cap from the CPU socket. The cap is used to protect the CPU socket against dust and harmful particles. Remove the protective cap only when you are about to install the CPU.

7-1.Insert the CPU into the socket. The gold triangular mark on the CPU must align with the chamfer corner of the CPU socket shown in the photo.

Important: The CPU will fit in only one orientation and can easily be seated without exerting any force.

► CPU ► Installing the CPU

7-2. Two keys on the socket and notches on the CPU also facilitate alignment.

7-3.The CPU's notch will fit into the socket's alignment key when it's seated in the correct orientation.

- 8. Close the load plate then push the load lever down.
 - While closing the load plate, make sure the front edge of the load plate slides under the retention knob.
- 9. Press down the load lever and hook it under the retention tab.

► CPU

Installing the Fan and Heat Sink

The CPU must be kept cool by using a CPU fan with heat sink. Without sufficient air circulation across the CPU and heat sink, the CPU will overheat damaging both the CPU and system board.

A box

A boxed Intel[®] processor already includes the CPU fan and heat sink assembly. If your CPU was purchased separately, make sure to only use Intel[®]-certified fan and heat sink.

1. Before you install the fan / heat sink, you must apply a thermal paste onto the top of the CPU. The thermal paste is usually supplied when you purchase the fan / heat sink assembly. Do not spread the paste all over the surface. When you later place the heat sink on top of the CPU, the compound will disperse evenly.

Some heat sinks come with a patch of pre-applied thermal paste. Do not apply thermal paste if the fan / heat sink already has a patch of thermal paste on its underside. Peel the strip that covers the paste before you place the fan / heat sink on top of the CPU.

- 2. Place the heat sink on top of the CPU. The 4 spring screws around the heat sink, which are used to secure the heat sink onto the system board, must match the 4 mounting holes around the socket.
- 3. Orient the heat sink so that the CPU fan's cable is nearest the CPU fan connector.
 - CPU fan connector

4. Screw tight two of the spring screws at opposite corners into the mounting holes. And then proceed with the other two spring screws.

5. Connect the CPU fan's cable to the CPU fan connector on the system board.

Jumper Settings

LCD/Inverter Power Select (JP9)

Clear CMOS (JP1)

If any anomaly of the followings is encountered -

- a) CMOS data is corrupted;
- b) you forgot the supervisor or user password;
- c) failure to start the system due to BIOS mis-configuration

- it is suggested that the system be reconfigured with default values stored in the ROM BIOS. To load the default values stored in the ROM BIOS, please follow the steps below.

- 1. Power-off the system and unplug the power cord.
- 2. Put a jumper cap on JP1's pin 2 and pin 3. Wait for a few seconds and set JP1 back to its default setting, i.e. jumper cap on pin 1 and pin 2.
- 3. Plug the power cord and power-on the system.

1-2 On: Normal (default)

The power level supplied to the LVDS/eDP inverter power connector can be switched between +5V or +12V via JP9.

1-2 On: +12V (default)

Important:

Before powering-on the system, make sure that the setting of jumper matches the specifications of the LVDS/eDP LCD. Incorrect power voltage may cause irreversible damage to your LCD panel.

User's Manual | CS103

Jumper Settings

Panel Power Select (JP8)

Jumper Settings

Backlight Brightness Select (JP7)

The power level supplied to the LVDS/eDP panel can be switched between +3.3V, +5V or +12V via JP8.

The power level supplied to the LCD backlight can be switched between +3.3V or +5V via JP7.

■ 5-6 On: +3.3V (default)

Important:

Before powering-on the system, make sure that the setting of the jumper matches the specifications of the LVDS/eDP LCD. Incorrect power voltage may cause irreversible damage to your LCD panel.

Important:

2 П

■ 1-2 On: +3V3 (default)

Before powering-on the system, make sure that the setting of the jumper matches the specifications of the LCD's backlight power. Incorrect power voltage may cause irreversible damage to your LCD's backlight.

2

2-3 On: +5V

User's Manual | CS103

Rear I/O Ports

9~36V DC-In

DC In coaxial

The rear panel I/O ports consist of the following:

- 2 DP++ ports
- 1 DC-In, optionally internal vertical 4-pin connector
- 2 RJ45 LAN ports
- 4 USB 3.1ports, Gen2 for C246/Q370, Gen1 for H310

Connect a coaxial DC power cord to the rear coaxial connector for DC supply. The vertical 4-pin type is available upon request.

Important:

Using a voltage higher than the recommended range may result in failure in starting and booting the system or causing irreversible damage to the system board. A power adaptor/converter is necessary when the power source on site does not comply with the power specifications of the board.

Rear I/O Ports

USB Ports

Rear I/O Ports

Graphics Display

DisplayPort ++

The DisplayPort (DP) is a digital display interface used to connect a display device such as a computer monitor. It is used to transmit audio and video simultaneously. The interface, which is developed by VESA, delivers higher performance features than any other digital interface.

USB allows data exchange between your computer and a wide range of simultaneously accessible external Plug and Play peripherals. The system board is equipped with multiple USB Type A ports at the rear side – four USB 3.1 Gen1 (H310) or Gen2 (C246/Q370) ports. For the internal USB ports, please refer to the next section. Please refer to the next section for internal USB connectors.

Wake-On-USB Keyboard/Mouse

The Wake-On-USB Keyboard/Mouse function allows you to use a USB keyboard or USB mouse to wake up a system from the S3 (STR - Suspend To RAM) state.

Rear I/O Ports

RJ45 LAN

Internal I/O Connectors

COM (Serial) Port

COM4 (left), COM3 (middle), COM2 (right)

BIOS Setting

Configure the onboard LAN ports in the Advanced menu ("ACPI Configuration" submenu) of the BIOS. Refer to the chapter 3 for more information.

Driver Installation

Install the LAN drivers. Refer to the chapter 4 for more information.

Features

- LAN1: Intel® I219LM LAN PHY
- LAN2: Intel® I211AT PCIe Gigabit Ethernet LAN Controller

Internal I/O Connectors COM (Serial) Port

The serial ports are asynchronous communication ports with 16C550A-compatible UARTs that can be used with modems, serial printers, remote display terminals, and other serial devices.

COM 1 and 2 support three serial modes, i.e. RS232, RS422, and RS485. COM 3 and 4 only support RS232.

BIOS Setting

Configure the onboard COM ports in the Advanced menu ("Console Redirection" and "SIO NU-VOTON6116D" submenus) of the BIOS. Refer to chapter 3 for more information.

C246/Q370/H310

USB Ports

Internal I/O Connectors

The USB device allows data exchange between your computer and a wide range of simultaneously accessible external Plug and Play peripherals.

In addition to the rear USB ports as introduced previously in this chapter, the system board is equipped with four internal USB 2.0 ports (two pin headers) and 2 USB 3.1 Gen2 ports as illustrated above. The pin headers for USB 9/10 can also be replaced by a Type A vertical connector.

The internal USB pin headers may be connected to a card-edge bracket. Install the card-edge bracket to an available slot at the rear of the system chassis and then insert the USB port cables to a connector.

Wake-On-USB Keyboard/Mouse

The Wake-On-USB Keyboard/Mouse function allows you to use a USB keyboard or USB mouse to wake up a system from the S state(s).

COM Port Pin Assignment

Pin	RS232	RS422 (COM 1/2)	RS485 (COM 1/2)
1	DCD-	TXD-	Data-
2	RD	TXD+	Data+
3	TD	RXD+	N.C.
4	DTR-	RXD-	N.C.
5	GND	GND	GND
6	DSR-	N.C.	N.C.
7	RTS-	N.C.	N.C.
8	CTS-	N.C.	N.C.
9	RI-	N.C.	N.C.

Internal I/O Connectors

Front Audio

The Front Audio internal connector allows you to connect to the second line-out and mic-in jacks that are at the front panel of your system.

Internal I/O Connectors

SATA (Serial ATA)

The Serial ATA (SATA) connectors are used to connect the Serial ATA device. The system board supports six SATA ports and each provides data rate up to 6Gb/s. Connect one end of the Serial ATA cable to a SATA connector and the other end to your Serial ATA device.

Front Audio Pin Assignment

Pin	Assignment	Pin	Assignment
1	Mic-L	2	GND
3	Mic-R	4	N.C.
5	Line-Out-R	6	Mic-JD (sense)
7	GND	8	KEY
9	Line-Out-L	10	Line-JD (sense)

Internal I/O Connectors

Chassis Intrusion

Internal I/O Connectors

Cooling Fan Connectors

The board supports the chassis intrusion detection function. Connect the chassis intrusion sensor cable from the chassis to this connector. When the system's power is on and a chassis intrusion occurred, an alarm will sound. When the system's power is off and a chassis intrusion occurred, the alarm will sound only when the system restarts.

These fan connectors are used to connect to cooling fans. Cooling fans provide adequate air circulation throughout the chassis and dissipate heat to prevent overheating of the system board and components. The 4-pin fan provides PWM to modulate fan speed whereas the 3-pin fans modulate fan speed via voltage modulation.

HDD-LED - Hard Disk Drive LED

Lighting of the LED indicates that the hard drive is being accessed.

RESET - Reset Switch

This switch allows you to reboot without having to power off the system.

PWR-LED - Power/Standby LED

When the system's power is on, this LED will light up. When the system is in the S1 (POS -Power On Suspend) state, it will blink at 1-second intervals. When the system is in the S3 (STR -Suspend To RAM) state, it will blink at 4-second intervals.

ATX-SW - ATX Power Switch

This switch is used to power on or off the system.

The SMBus (System Management Bus) connector is used to connect the SMBus device. It is a multiple device bus that allows multiple chips to connect to the same bus and enable each one to act as a master by initiating data transfer.

The external lithium ion battery supplies power to the real-time clock and CMOS memory as an auxiliary source of power when the main power is shut off.

External Battery

Connect to board

Safety Measures

- There exists explosion hazard if the battery is incorrectly installed.
- · Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to local ordinances.

Internal I/O Connectors

LVDS Panel

The system board allows you to connect a LCD Display Panel by means of the LVDS LCD panel connector and the LCD/Inverter power connector. These connectors transmit video signals and power from the system board to the LCD Display Panel.

Jumper Setting

The power voltage of the LCD panel, inverter power, and backlight power is configured via jumper settings as previously instructed in this chapter.

Internal I/O Connectors

Installing the M.2 Module

Before installing the M.2 module into the M.2 socket, please make sure that the following safety cautions are well-attended.

- 1. Make sure the PC and all other peripheral devices connected to it has been powered down.
- 2. Disconnect all power cords and cables.
- 3. Locate the M.2 socket on the system board
- 4. Make sure the notch on card is aligned to the key on the socket.
- 5. Make sure the standoff screw is removed from the standoff.

M.2 Sockets

The M.2 socket is the Next Generation Form Factor (NGFF) which is designed to support multiple modules and make the M.2 more suitable in application for solid-state storage. The board preserves space for the M.2 M key socket (22mm x 80mm) on the bottom side, and M.2 E key sicket (22mm x 30mm) on the top side.

PCI Express x4 Slot

Install PCI Express cards such as network cards or other cards that comply to the PCI Express specifications into the PCI Express x4 slot.

Internal I/O Connectors
 Expansion Slots

Internal I/O Connectors

LPC

The LPC connector is used for debugging.

Please follow the steps below to install the card into the socket.

Step 1: Insert the card into the socket at an angle while making sure the notch and key are perfectly aligned.

Step 2:

Press the end of the card far from the socket down until against the stand-off.

Step 3:

Screw tight the card onto the stand-off with a screw driver and a stand-off screw until the gap between the card and the stand-off closes up. The card should be lying parallel to the board when it's correctly mounted.

Chapter 3 - BIOS Settings

Overview

The BIOS is a program that takes care of the basic level of communication between the CPU and peripherals. It contains codes for various advanced features found in this system board. The BIOS allows you to configure the system and save the configuration in a battery-backed CMOS so that the data retains even when the power is off. In general, the information stored in the CMOS RAM of the EEPROM will stay unchanged unless a configuration change has been made such as a hard drive replaced or a device added.

It is possible that the CMOS battery will fail causing CMOS data loss. If this happens, you need to install a new CMOS battery and reconfigure the BIOS settings.

Note:

The BIOS is constantly updated to improve the performance of the system board; therefore the BIOS screens in this chapter may not appear the same as the actual one. These screens are for reference purpose only.

Default Configuration

Most of the configuration settings are either predefined according to the Load Optimal Defaults settings which are stored in the BIOS or are automatically detected and configured without requiring any actions. There are a few settings that you may need to change depending on your system configuration.

Entering the BIOS Setup Utility

The BIOS Setup Utility can only be operated from the keyboard and all commands are keyboard commands. The commands are available at the right side of each setup screen.

The BIOS Setup Utility does not require an operating system to run. After you power up the system, the BIOS message appears on the screen and the memory count begins. After the memory test, the message "Press DEL to run setup" will appear on the screen. If the message disappears before you respond, restart the system or press the "Reset" button. You may also restart the system by pressing the <Ctrl> <Alt> and keys simultaneously.

Legends

Keys	Function
Right / Left arrow	Move the highlight left or right to select a menu
Up / Down arrow	Move the highlight up or down between submenus or fields
<enter></enter>	Enter the highlighted submenu
+ (plus key)/F6	Scroll forward through the values or options of the highlighted field
- (minus key)/F5	Scroll backward through the values or options of the highlighted field
<f1></f1>	Display general help
<f2></f2>	Display previous values
<f9></f9>	Optimized defaults
<f10></f10>	Save and Exit
<esc></esc>	Return to previous menu

Scroll Bar

When a scroll bar appears to the right of the setup screen, it indicates that there are more available fields not shown on the screen. Use the up and down arrow keys to scroll through all the available fields.

Submenu

When " \blacktriangleright " appears on the left of a particular field, it indicates that a submenu which contains additional options are available for that field. To display the submenu, move the highlight to that field and press <Enter>.

Main

The Main menu is the first screen that you will see when you enter the BIOS Setup Utility.

Enable or disable the current serial COM port.

RS485 Auto Flow

Enable or disable RS485 auto flow. This field is only available for COM ports that support RS485 mode.

Advanced NCT6116D HW Monitor

Smart Fan Function

Smart Fan is a fan speed moderation strategy dependent on the current system temperature. When the system temperature goes higher than the Boundary setting, the fan speed will be turned up to the setting of the Fan Speed Count that bears the same index as the Boundary field.

▼ SYS Smart Fan/CPU Smart Fan Control = [Enabled]

Boundary 1 to Boundary 4

Set the boundary temperatures that determine the fan speeds accordingly, the value ranging from 0-127°C. For example, when the system temperature reaches Boundary 1 setting, the fan speed will be turned up to the designated speed of the Fan Speed Count 1 field.

Fan Speed Count 1 to Fan Speed Count 4

Set the fan speed, the value ranging from 1-100%, 100% being full speed. The fans will operate according to the specified boundary temperatures above-mentioned.

▼ SYS Smart Fan/CPU Smart Fan Control = [Disabled]

Fix Fan Speed Count

Set the fan speed, the value ranging from 1-100%, 100% being full speed. The fans will always operate at the specified speed regardless of gauged temperatures.

LAN1(I219)

Enable or disable onboard NIC.

Wake on LAN Enable

Enable or disable integrated LAN to wake the system.

State After G3

This field is to specify what state the system should be in when power is re-applied after a power failure.

- S0 State
- The system automatically powers on after power failure.

S5 State The system enter soft-off state after power failure. Power-on signal input is required to power up the system.

Note: The sub-menus are detailed in following sections.

SATA Controller(s)

This field is used to enable or disable the Serial ATA controller.

SATA Speed

This field is used to select SATA speed generation limit: Auto, Gen1, Gen2 or Gen3.

SATA Mode Selection

The mode selection determines how the SATA controller(s) operates.

- AHCI This option allows the Serial ATA controller(s) to use AHCI (Advanced Host Controller Interface).
- Intel RST Premium With Intel Optane System Acceleration This option allows you to create RAID or Intel Rapid Storage configuration along with Intel[®] Optane[™] system acceleration on Serial ATA devices.

Use RST Legacy OROM

This field shows up when SATA Mode Selection is set to Intel RST Premium With Intel Optane System Acceleration. Enable or disable to use RST Legacy OROM when CSM is enabled.

Port 0/1/2/3/4/5 and Hot Plug

Enable or disable the Serial ATA port and its hot plug function.

Secure Boot	[Disabled] Not Active	bled Platform Key(PK) enrolled, System mode User/Deployed, and CSM
Secure Boot Customization ► Restore Factory Keys ► Reset To Setup Mode	[Custom]	disabled
► Key Management		
		→←: Select Screen ↑: Select Item Enter: Select +/-: Change Opt. F1: General Help F2: Previous Values F9: Optimized Defaults F10: Save & Exit ESC: Exit

Secure Boot

The Secure Boot store a database of certificates in the firmware and only allows the OSes with authorized signatures to boot on the system. To activate Secure Boot, please make sure that "Secure Boot" is "[Enabled]", Platform Key (PK) is enrolled, "System Mode" is "User", and CSM is disabled. After enabling/disabling Secure Boot, please save the configuration and restart the system. When configured and activated correctly, the Secure Boot status will be "Active".

Secure Boot Customization

Select the secure boot mode – Standard or Custom. When set to Custom, the following fields will be configurable for the user to manually modify the key database.

Restore Factory Keys

Force system to User Mode. Load OEM-defined factory defaults of keys and databases onto the Secure Boot. Press Enter and a prompt will show up for you to confirm.

Reset To Setup Mode

Clear the database from the NVRAM, including all the keys and signatures installed in the Key Management menu. Press Enter and a prompt will show up for you to confirm.

Security Secure Boot

Key Management

Factory Key Provision

Enable or disable the provision factory default keys on next re-start. This will only take place when the "System Mode" in the previous menu is in "Setup", which can be achieved by moveing the cursor to the "Reset To Setup Mode" and press Enter.

Restore Factory Keys

Force system to User Mode. Configure NVRAM to contain OEM-defined factory default Secure Boot keys.

Reset To Setup Mode

Clear the database from the NVRAM, including all the keys and signatures installed in the Key Management menu. Press Enter and a prompt will show up for you to confirm.

Export Secure Boot variables

Export the Secure Boot settings (i.e. all keys and signatures) as files to the root directory of a file system device. Press Enter and select a storage device listed in the pop-up menu. The saved files will be named automatically according to the type of key/signature as listed below.

- "PK" for Platform Keys
- "KEK" for Key Exchange Keys
- "db" for Authorized Signatures
- "dbx" for Forbidden Signatures

Enroll Efi Image

Allow the image to run in Secure Boot mode. Enroll SHA256 Hash certificate of a PE image into Authorized Signature Database (db). Press Enter and select a storage device listed in the popup menu, select a directory, and then select the EFI Image document.

Remove 'UEFI CA' from DB

Remove Microsoft UEFI CA from the Authorized Signature database. For systems that support Device Guard, Microsoft UEFI CA must NOT be included in the Authorized Signature database.

Restore DB defaults

Press Enter to restore the database variable to factory defaults.

Manually configure the following keys and signatures. Move the cursor to the field and press Enter, and then a pop-up menu will show up.

Platform Key(PK), Key Exchange Keys, Authorized Signatures, Forbidden Signatures, Authorized TimeStamps, OsRecovery Signatures

Details	List the information of enrolled keys and signatures
Export	Save the key or signature as a file to the root directory of a file system. The saved files will be named automatically according to the type of key/signature as previously listed in the "Export Secure Boot Variables".
Update	Load factory default database
Append	Enroll keys and signatures from a file system
Delete	Delet keys and signatures

Setup Prompt Timeout

Set the number of seconds to wait for the setup activation key. 65535 (0xFFFF) denotes indefinite waiting.

Bootup NumLock State

Select the keyboard NumLock state: On or Off.

Quiet Boot

This section is used to enable or disable quiet boot option.

Boot Option Priorities

Rearrange the system boot order of available boot devices.

BGRT Logo

It is used to enable or disable to support display logo with ACPI BGRT table.

Driver Option Priorities

Rearrange the order of available drivers to be loaded.

Note:

If "Boot option filter" of "CSM Configuration" is set to "UEFI and Legacy" or "UEFI only" and "Quiet Boot" is set to enabled, "BGRT Logo" will show up for configuration. Refer to the Advanced > CSM Configuration for more information.

Save & Exit

→←: Select Screen 11: Select Item
Enter: Select +/- : Change Opt.
F1: General Help F2: Previous Values
F9: Optimized Defaults F10: Save & Exit
ESC: Exit

Save Changes and Reset

To save the changes, select this field and then press <Enter>. A dialog box will appear. Select Yes to reset the system after saving all changes made.

Discard Changes and Reset

To discard the changes, select this field and then press <Enter>. A dialog box will appear. Select Yes to reset the system setup without saving any changes.

Restore Defaults

To restore and load the optimized default values, select this field and then press <Enter>. A dialog box will appear. Select Yes to restore the default values of all the setup options.

Boot Override

Move the cursor to an available boot device and press Enter, and then the system will immediately boot from the selected boot device. The Boot Override function will only be effective for the current boot. The "Boot Option Priorities" configured in the Boot menu will not be changed.

Save Setting to file

Select this option to save BIOS configuration settings to a USB flash device.

Restore Setting from file

This field will appear only when a USB flash device is detected. Select this field to restore setting from the USB flash device.

Chapter 3 BIOS SETTINGS

Updating the BIOS

To update the BIOS, you will need the new BIOS file and a flash utility. Please contact technical support or your sales representative for the files and specific instructions about how to update BIOS with the flash utility. For updating AMI BIOS in UEFI mode, you may refer to the how-to video at https://www.dfi.com/Knowledge/Video/5.

Notice: BIOS SPI ROM

- 1. The Intel[®] Management Engine has already been integrated into this system board. Due to the safety concerns, the BIOS (SPI ROM) chip cannot be removed from this system board and used on another system board of the same model.
- 2. The BIOS (SPI ROM) on this system board must be the original equipment from the factory and cannot be used to replace one which has been utilized on other system boards.
- 3. If you do not follow the methods above, the Intel® Management Engine will not be updated and will cease to be effective.

Note:

- a. You can take advantage of flash tools to update the default configuration of the BIOS (SPI ROM) to the latest version anytime.
- b. When the BIOS IC needs to be replaced, you have to populate it properly onto the system board after the EEPROM programmer has been burned and follow the technical person's instructions to confirm that the MAC address should be burned or not.

Chapter 4 - Intel AMT Settings

Overview

Intel Active Management Technology (Intel® AMT) combines hardware and software solution to provide maximum system defense and protection to networked systems.

The hardware and software information are stored in non-volatile memory. With its built-in manageability and latest security applications, Intel® AMT provides the following functions.

Discover

Allows remote access and management of networked systems even while PCs are powered off; significantly reducing desk-side visits.

Repair

Remotely repair systems after OS failures. Alerting and event logging help detect problems quickly to reduce downtime.

Protect

Intel AMT's System Defense capability remotely updates all systems with the latest security software. It protects the network from threats at the source by proactively blocking incoming threats, reactively containing infected clients before they impact the network, and proactively alerting when critical software agents are removed.

Enable Intel[®] AMT in the AMI BIOS

- 1. Power-on the system then press to enter the main menu of the AMI BIOS.
- 2. In the Advanced menu, select PCH-FW Configuration.

3. Set the AMT BIOS Features field to Enabled.

Chapter 5 - RAID

The system board allows configuring RAID on Serial ATA drives. It supports RAID 0, RAID 1, RAID 5 and RAID 10.

RAID Levels

RAID 0 (Striped Disk Array without Fault Tolerance)

RAID 0 uses two new identical hard disk drives to read and write data in parallel, interleavedstacks. Data is divided into stripes and each stripe is written alternately between two disk drives. This improves the I/O performance of the drives at different channel; however it is not fault tolerant. A failed disk will result in data loss in the disk array.

RAID 1 (Mirroring Disk Array with Fault Tolerance)

RAID 1 copies and maintains an identical image of the data from one drive to the other drive. If a drive fails to function, the disk array management software directs all applications to the other drive since it contains a complete copy of the drive's data. This enhances data protection and increases fault tolerance to the entire system. Use two new drives or an existing drive and a new drive but the size of the new drive must be the same or larger than the existing drive.

RAID 5

RAID 5 stripes data and parity information across hard drives. It is fault tolerant and provides better hard drive performance and more storage capacity.

RAID 10 (Mirroring and Striping)

RAID 10 is a combination of data striping and data mirroring providing the benefits of both RAID 0 and RAID 1. Use four new drives or an existing drive and three new drives for this configuration.

RAID Level	Min. Drives	Protection	Description
RAID 0	2	None	Data striping without redundancy
RAID 1	2	Single Drive Failure	Disk mirroring
RAID 5	3	Single Drive Failure	Block-level data striping with distributed parity
RAID 10	4	1 Disk Per Mirrored Stripe (not same mirror)	Combination of RAID 0 (data striping) and RAID 1 (mirroring)

M.2 PCIe SSD cannot be used to set up a RAID set either with an M.2 SATA SSD or a SATA hard drive.

Setup Procedure

To enable the RAID function, the following settings are required.

- 1. Install SATA drives.
- 2. Enable RAID in the Insyde BIOS.
- 3. Create a RAID volume.
- 4. Install the Intel Rapid Storage Technology Utility.

Step 1: Install SATA Drives

Refer to chapter 2 for details on connecting the Serial ATA drives.

Important:

1. Please make sure the SATA drives that you are to create a RAID volume with are connected and powered, and are able to be detected by the system. Otherwise, the RAID BIOS utility would not be accessible.

2. While creating a RAID volume, please make sure the system, drives, and cables are perfectly steady and mounted correctly. Disturbance during creating a RAID volume will result in irreversible data corruption sotred on the drive.

Step 2: Enable RAID in the AMI BIOS

- 1. Power-on the system then press to enter the main menu of the AMI BIOS.
- 2. Go to "Chipset" menu and select the "PCH-IO Configuration" menu then "SATA And RST Configuration" menu.
- 3. Change the "SATA Mode Selection" to "Intel RST Premium With Intel Optane System Acceeration" mode.
- 4. Press F10 to save the changes.
- 5. Reboot the system.

Note:

Step 3: Create a RAID Volume

1. Go to the "Advanced" menu of the AMI BIOS and select "Intel(R) Rapid Storage Technology".

- 2. The screen displays all available drives. Select "Create RAID volume" to create a RAID volume".
- 3. Use the up or down arrow keys to select the RAID level and press <Enter>.
- 4. Use the up or down arrow keys to scroll through the list of hard drives and press <Enter> to select the drive.
- 5. Press <Enter>.
- 6. Use the up or down arrow keys to select the strip size and press <Enter>.
- 7. Enter the volume size and press <Enter>.
- 8. At the prompt, press <Y> to confirm volume creation.

Step 4: Install the Intel Rapid Storage Technology Utility

The Intel Rapid Storage Technology Utility can be installed from within Windows. It allows RAID volume management (create, delete, migrate) from within the operating system. It will also display useful SATA device and RAID volume information. The user interface, tray icon service and monitor service allow you to monitor the current status of the RAID volume and/or SATA drives. It enables enhanced performance and power management for the storage subsystem.

Chapter 6 - Supported Software

Install drivers, utilities and software applications that are required to facilitate and enhance the performance of the system board. You may acquire the software from your sales representatives, from an optional DVD included in the shipment, or from the website download page at https://www.dfi.com/DownloadCenter.

Auto-run Menu

After inserting your DVD-ROM into your optical drive or executing your DVD image, the System Utility auto-run menu may pop up. Click on the utility or driver that is to be installed on the system. Please refer to the following sections that correspond to your selection for more information.

tem Utility	×
Model Name	
00001	Intel Chipset Software Installation Utility
CS631	Intel ME Drivers
	Intel Serial IO Drivers
	Intel Rapid Storage Technology Drivers
	Intel HD Graphics Drivers
	Realtek Audio Drivers
	Intel LAN Drivers
	F6 Floppy
	Adobe Acrobat Reader 9.3
	User's Manual (C246)
	More >>
	Exit

Click "More >>" on the lower right to go to the next page of the auto-run menu, and click "<< Previous" to return to the previous menu.

► Intel Chipset Software Installation Utility

The Intel Chipset Software Installation Utility is used for updating Windows[®] INF files so that the Intel chipset can be recognized and configured properly in the system.

1. Setup is ready to install the utility. Click "Next".

2. Read the license agreement then click "Accept".

License Agreement			
INTEL SOFTWARE LICENSE AGREE User)	EMENT (OEM / IHV / ISV	Distribution & Single	^
IMPORTANT - READ BEFORE COP Do not use or load this software : "Software") until you have careful loading or using the Software, yo not wish to so agree, do not insta	and any associated mate Ily read the following ten ou agree to the terms of t	rials (collectively, the ms and conditions. By

	Back	Accept Cancel	~

Note: This step can be ignored if the applications are downloaded standalone files.

3. Go through the readme document for more installation tips then click "Install".

4. The step displays the installing status in the progress.

5. After completing installation, click "Restart Now" to exit setup.

Restarting the system will allow the new software installation to take effect.

► Intel HD Graphics Drivers

 Setup is now ready to install the graphics driver. Click "Next".

By default, the "Automatically run WinSAT and enable the Windows Aero desktop theme" is enabled. With this enabled, after installing the graphics driver and the system rebooted, the screen will turn blank for 1 to 2 minutes (while WinSAT is running) before the Windows 10 desktop appears. The "blank screen" period is the time Windows is testing the graphics performance.

We recommend that you skip this process by disabling this function then click "Next".

2. Read the license agreement then click "Yes".

3. Go through the readme document for system requirements and installation tips then click "Next".

4. Setup is now installing the driver. Click "Next" to continue.

Intel® Installation Framework

Intel[®] Graphics Driver

 Click "Yes, I want to restart this computer now" then click "Finish".

Restarting the system will allow the new software installation to take effect.

Realtek Audio Drivers

1. Setup is ready to install the driver. Click "Next".

2. Click "Yes, I want to restart my computer now" then click "Finish".

Restarting the system will allow the new software installation to take effect.

► Intel ME Drivers

- 1. Setup is ready to install the driver. Click "Next".
- Setup X
