FCC and DOC Statement on Class B

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio TV technician for help.

Notice:

- 1. The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- 2. Shielded interface cables must be used in order to comply with the emission limits.

Warranty

- 1. Warranty does not cover damages or failures that arised from misuse of the product, inability to use the product, unauthorized replacement or alteration of components and product specifications.
- 2. The warranty is void if the product has been subjected to physical abuse, improper installation, modification, accidents or unauthorized repair of the product.
- 3. Unless otherwise instructed in this user's manual, the user may not, under any circumstances, attempt to perform service, adjustments or repairs on the product, whether in or out of warranty. It must be returned to the purchase point, factory or authorized service agency for all such work.
- 4. We will not be liable for any indirect, special, incidental or consequencial damages to the product that has been modified or altered.

Static Electricity Precautions

It is quite easy to inadvertently damage your PC, system board, components or devices even before installing them in your system unit. Static electrical discharge can damage computer components without causing any signs of physical damage. You must take extra care in handling them to ensure against electrostatic build-up.

- 1. To prevent electrostatic build-up, leave the system board in its anti-static bag until you are ready to install it.
- 2. Wear an antistatic wrist strap.
- 3. Do all preparation work on a static-free surface.
- 4. Hold the device only by its edges. Be careful not to touch any of the components, contacts or connections.
- 5. Avoid touching the pins or contacts on all modules and connectors. Hold modules or connectors by their ends.

Important:

Electrostatic discharge (ESD) can damage your processor, disk drive and other components. Perform the upgrade instruction procedures described at an ESD workstation only. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the system chassis. If a wrist strap is unavailable, establish and maintain contact with the system chassis throughout any procedures requiring ESD protection.

Safety Measures

To avoid damage to the system:

Use the correct AC input voltage range.

To reduce the risk of electric shock:

 Unplug the power cord before removing the system chassis cover for installation or servicing. After installation or servicing, cover the system chassis before plugging the power cord.

About the Package

The package contains the following items. If any of these items are missing or damaged, please contact your dealer or sales representative for assistance.

- One CS101-Q370/C246/H310 motherboard
- One Serial ATA data with power cable (Length: 300mm)
- One DB9-to-IDC COM port cable (Length: 250mm)
- One M2*5 Screw with spring washer
- One battery addendum
- One DVD
- One Quick Reference hard copy

The board and accessories in the package may not come similar to the information listed above. This may differ in accordance to the sales region or models in which it was sold. For more information about the standard package in your region, please contact your dealer or sales representative.

Optional Items

- USB 2.0 port cable (Length: 200mm)
- DB9-to-IDC COM port cable (Length: 250mm)
- Serial ATA data with power cable (Length: 300mm)
- I/O shield
- Thermal solution

The board and accessories in the package may not come similar to the information listed above. This may differ in accordance to the sales region or models in which it was sold. For more information about the standard package in your region, please contact your dealer or sales representative.

Before Using the System Board

Before using the system board, prepare basic system components.

If you are installing the system board in a new system, you will need at least the following internal components.

- A CPU
- Memory module
- Storage devices such as hard disk drive, etc.

You will also need external system peripherals you intend to use which will normally include at least a keyboard, a mouse and a video display monitor.

Chapter 1 - Introduction

Chapter 1 - Introduction

► Specifications

SYSTEM	Processor	9th Generation Intel [®] Core™ Processors, LGA 1151 Socket, TDP
		up to 65W • i7-9700TE (Core 8; Max speed 3.8 GHz; TDP 35W) • i5-9500E (Core 6; Max speed 4.2 GHz; TDP 65W) • i5-9500TE (Core 6; Max speed 3.6 GHz; TDP 35W) • i3-9100E (Core 4; Max speed 3.7 GHz; TDP 35W) • i3-9100TE (Core 4; Max speed 3.2 GHz; TDP 35W) 8th Generation Intel [®] Processors, LGA 1151 Socket, TDP up to 80W • Xeon E-2176G (Core 6; Max speed 4.7 GHz; TDP 80W) • Core [™] i7-8700 (Core 6; Max speed 4.6 GHz; TDP 65W) • Core [™] i3-8100 (Core 6; Max speed 4.1 GHz; TDP 65W) • Core [™] i3-8100 (Core 4; Max speed 3.6 GHz; TDP 65W) • Pentium G5400 (Core 2; Max speed 3.7 GHz; TDP 58W) • Celeron G4900 (Core 2; Max speed 3.1 GHz; TDP 54W)
	Memory	Two 260-pin SODIMM up to 32GB Dual Channel DDR4 2666MHz (C246 support ECC)
	Chipset	Intel® Q370/C246/H310 Chipset
	BIOS	AMI SPI 128Mbit
GRAPHICS	Controller	Intel $^{\circ}$ UHD Graphics 630 (only Pentium G5400, Celeron G4900 support 610)
	Feature	OpenGL 4.4, DirectX 12, OpenCL 2.1 HW Decode: AVC/H.264, MPEG2, VC1/WMV9, JPEG/MJPEG, HEVC/ H265, VP8, VP9 HW Encode: AVC/H.264, MPEG2, JPEG, HEVC/H265, VP8, VP9
	Display	1 x LVDS up to 4096x2304 @ 60Hz, or eDP up to 1920x1200 @ 60Hz (by request) 2 x DP++ up to 4096x2304 @ 60Hz
	Multi- Displays	Dual Displays (H310): DP++ + DP++; DP++ + HDMI; DP++ + LVDS(eDP); HDMI+ LVDS(eDP) Triple Displays (Q370/C246): DP++ + DP++ + HDMI; DP++ + DP++ + LVDS(eDP); DP++ + HDMI + LVDS(eDP)
EXPANSION	Interface	Q370/C246: 1 x PCIe x4 (Gen 3) 1 x Full-size Mini PCIe (PCIe x1) or mSATA (by request) 1 x M.2 2280 M Key for storage (PCIe Gen3 x4, support NVMe) 1 x M.2 2230 E Key for BT/Wifi (USB 2.0/PCIe x1) H310: 1 x PCIe x4 (Gen 3) 1 x mSATA 1 x M.2 2280 M Key for storage (PCIe Gen2 x1) 1 x M.2 2230 E Key for BT/Wifi (USB 2.0/PCIe x1)
AUDIO	Audio Codec	Realtek ALC888S-VD2-GR
ETHERNET	Controller	Q370/C246: 1 x Intel® I219LM PHY, 1 x Intel® I211AT PCIe (10/100/1000Mbps) H310: 1 x Intel® I219V PHY, 1 x Intel® I211AT PCIe (10/100/1000Mbps)

REAR I/O	Ethernet	2 x GbE (RJ-45)
	USB	Q370/C246: 4 x USB 3.1 Gen2 Type A Connector H310:
		4 x USB 3.1 Gen1 Type A Connector
	Display	1 x HDMI 2 x DP++
INTERNAL I/O	Serial	2 x RS-232/422/485 (2.0mm pitch) 2 x RS-232 (2.0mm pitch)
	Display	1 x LVDS Connector 1 x eDP (available upon request)
	Audio	1 x Front Audio Header
	SATA	2 x SATA 3.0 (up to 6Gb/s) 1 x SATA Power RAID 0/1/5/10 (Q370/C246 only)
	DIO	1 x 8-bit DIO
	SMBus	1 x SMBus
	LPC	1 x LPC
	USB	4 x USB 2.0 (2.0mm pitch)
WATCHDOG TIMER	Output & Interval	System Reset, Programmable via Software from 1 to 255 Seconds
SECURITY	TPM	dTPM 2.0 (opt.)
POWER	Туре	12V DC-in
	Connector	DC jack colay 4 pins power connector (opt.)
	RTC Battery	CR2032 Coin Cell
OS SUPPORT		Microsoft Windows 10 IoT Enterprise 64-bit Linux
ENVIRONMENT	Temperature	Operating: 0 to 60°C Storage: -40 to 85°C
	Humidity	Operating: 5 to 90% RH Storage: 5 to 90% RH
MECHANICAL	Dimensions	Mini-ITX Form Factor 170mm (6.7") x 170mm (6.7")
	Height	PCB: 1.6mm Top Side: 20mm Bottom Side: 3mm

► Features

Watchdog Timer

The Watchdog Timer function allows your application to regularly "clear" the system at the set time interval. If the system hangs or fails to function, it will reset at the set time interval so that your system will continue to operate.

DDR4

DDR4 delivers increased system bandwidth and improves performance at a lower power than DDR3/DDR2.

Graphics

The integrated Intel[®] UHD graphics engine delivers an excellent blend of graphics performance and features to meet business needs. It provides excellent video and 3D graphics with outstanding graphics responsiveness. These enhancements deliver the performance and compatibility needed for today's and tomorrow's business applications. Supports 1 x LVDS/eDP (eDP available upon request), 1 x HDMI, and 2 x DP++ interfaces for display outputs.

PCI Express

PCI Express is a high bandwidth I/O infrastructure that possesses the ability to scale speeds by forming multiple lanes. The PCI Express architecture also supports high performance graphics infrastructure by enhancing the capability of a PCIe x4.

Serial ATA

Serial ATA is a storage interface that is compliant with SATA 1.0a specification. With speed of up to 6Gb/s (SATA 3.0), it improves hard drive performance faster than the standard parallel ATA whose data transfer rate is 100MB/s.

Gigabit LAN

Two Intel® Gigabit LAN controllers (Intel® I211AT PCIe and Intel® I219V PCIe) support up to 1Gbps data transmission. (CS101-H310)

Two Intel[®] Gigabit LAN controllers (Intel[®] I211AT PCIe and Intel[®] I219LM PCIe) support up to 1Gbps data transmission. (CS101-Q370/C246)

Audio

The Realtek ALC888S-VD2-GR audio codec provides High Definition audio output.

Wake-On-LAN

This feature allows the network to remotely wake up a Soft Power Down (Soft-Off) PC. It is supported via the onboard LAN port or via a PCI LAN card that uses the PCI PME (Power Management Event) signal. However, if your system is in the Suspend mode, you can power-on the system only through an IRQ or DMA interrupt.

Wake-On-USB

This function allows you to use a USB keyboard or USB mouse to wake up a system from the S3 (STR - Suspend To RAM) state.

RTC Timer

The RTC installed on the system board allows your system to automatically power-on on the set date and time.

ACPI STR

The system board is designed to meet the ACPI (Advanced Configuration and Power Interface) specification. ACPI has energy saving features that enables PCs to implement Power Management and Plug-and-Play with operating systems that support OS Direct Power Management. ACPI when enabled in the Power Management Setup will allow you to use the Suspend to RAM function.

With the Suspend to RAM function enabled, you can power-off the system at once by pressing the power button or selecting "Standby" when you shut down Windows[®] without having to go through the sometimes tiresome process of closing files, applications and operating system. This is because the system is capable of storing all programs and data files during the entire operating session into RAM (Random Access Memory) when it powers-off. The operating session will resume exactly where you left off the next time you power-on the system.

Power Failure Recovery

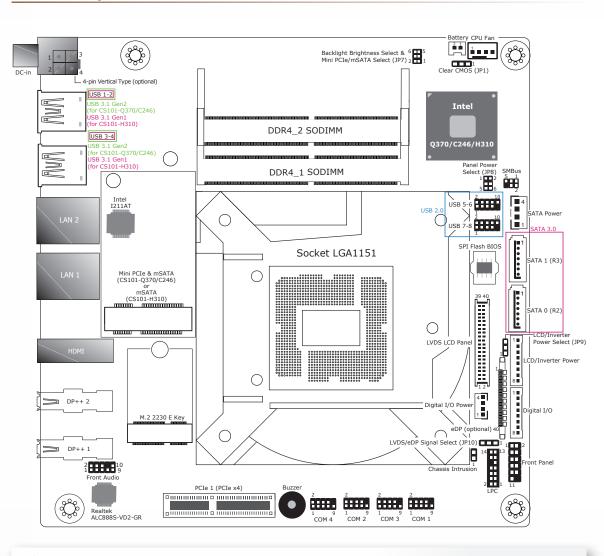

When power returns after an AC power failure, you may choose to either power-on the system manually or let the system power-on automatically.

USB

The CS101-Q370/C246 board supports the new USB 3.1 Gen2. The CS101-H310 board supports the USB 3.1 Gen1. USB 3.1 Gen2 is capable of running at a maximum transmission speed of up to 10 Gbit/s (1.2 GB/s) and is faster than USB 3.1 Gen1 (5 Gbit/s, or 625 MB/s), USB 2.0 (480 Mbit/s, or 60 MB/s) and USB 1.1 (12Mb/s). USB 3.1 reduces the time required for data transmission, reduces power consumption, and is backward compatible with USB 2.0. It is a marked improvement in device transfer speeds between your computer and a wide range of simultaneously accessible external Plug and Play peripherals.

Chapter 2 - Hardware Installation

► Board Layout

Note: A M.2 M Key 2280 socket with standoff is available at the bottom side of CS101-Q370/C246.

Important:

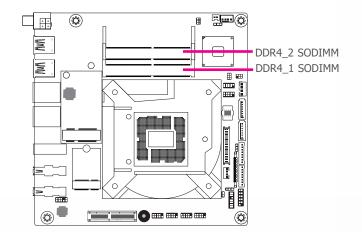

Electrostatic discharge (ESD) can damage your board, processor, disk drives, add-in boards, and other components. Perform installation procedures at an ESD workstation only. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the system chassis. If a wrist strap is unavailable, establish and maintain contact with the system chassis throughout any procedures requiring ESD protection.

System Memory

Important:

When the Standby Power LED lit red, it indicates that there is power on the system board. Power-off the PC then unplug the power cord prior to installing any devices. Failure to do so will cause severe damage to the motherboard and components.

System Memory

The system board supports the following memory interface.

Single Channel (SC)

Data will be accessed in chunks of 64 bits from the memory channels.

Dual Channel (DC)

Data will be accessed in chunks of 128 bits from the memory channels. Dual channel provides better system performance because it doubles the data transfer rate.

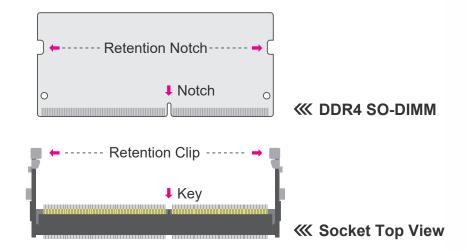

Single Channel	DIMMs are on the same channel. DIMMs in a channel can be identi- cal or completely different. However, we highly recommend using identical DIMMs. Not all slots need to be populated.
Dual Channel	DIMMs of the same memory configuration are on different channels.

System Memory

Installing the SODIMM Module

Before installing the memory module, please make sure that the following safety cautions are well-attended.

- 1. Make sure the PC and all other peripheral devices connected to it has been powered down.
- 2. Disconnect all power cords and cables.
- 3. Locate the SO-DIMM socket on the system board
- 4. Make sure the notch on memory card is aligned to the key on the socket.

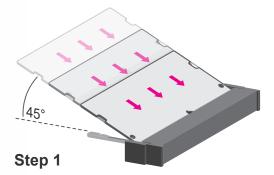

Features

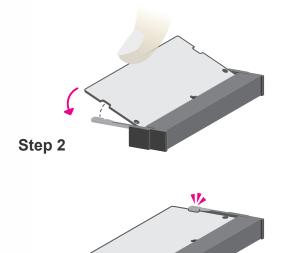

- Two 260-pin SODIMM up to 32GB
- Dual Channel DDR4 2666MHz
- ECC memory supported by CS101-C246

► System Memory ► Installing the SODIMM Module

Please follow the steps below to install the memory card into the socket.

Insert the memory card into the slot while making sure 1) the notch and the key are aligned, and 2) the non-connector end rises approximately 45 degrees horizontally. Press the card firmly into the socket while applying and maintaining even pressure on both ends.

Step 3

Press the end of the card far from the socket down while making sure the retention notch and the clip align as indicated by the dotted line in the illustration. If the retention notch and the clip do not align, please remove the card and re-insert it. Press the card all the way down.

The clips snap automatically and abruptly to the retention notches of the card sounding a distinctive click, and lock the card in place. Inspect that the clip sits in the notch. If not, please pull the clips outward, release and remove the card, and mount it again.

► CPU

The system board is equipped with a surface mount LGA 1151 socket. This socket is exclusively designed for installing a LGA 1151 packaged Intel CPU.

Important:

1. Before you proceed, make sure (1) the LGA 1151 socket comes with a protec-tive cap, (2) the cap is not damaged and (3) the socket's contact pins are not bent. If the cap is missing or the cap and/or contact pins are damaged, contact vour dealer immediately.

2. Make sure to keep the protective cap. RMA requests will be accepted and processed only if the LGA 1151 socket comes with the protective cap.

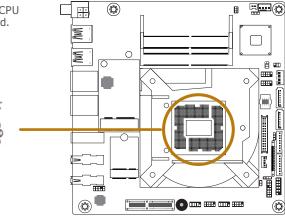

The system board used in the following illustrations may not resemble the actual board. These illustrations are for reference only.

Note:

► CPU

Installing the CPU

- 1. Make sure the PC and all other peripheral devices connected to it have been powered down.
- 2. Disconnect all power cords and cables.
- 3. Locate the LGA 1151 CPU socket on the system board.

Important:

The CPU socket must not come in contact with anything other than the CPU. Avoid unnecessary exposure. Remove the protective cap only when you are about to install the CPU.

 Unlock the socket by pressing the load lever down, moving it sideways until to escape the retention tab. Lift the load lever up when it's released.

5. Lift the load lever and the load plate all the way up as shown in the photo.

6. Remove the protective cap from the CPU socket. The cap is used to protect the CPU socket against dust and harmful particles. Remove the protective cap only when you are about to install the CPU.

7-1.Insert the CPU into

the socket. The gold triangular mark on the

CPU must align with

the chamfer corner of

the CPU socket shown

in the photo.

Protective cap

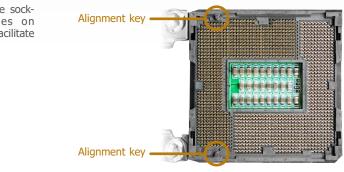

Golden triangular

► CPU ► Installing the CPU

7-2.Two keys on the socket and notches on the CPU also facilitate alignment.

8. Close the load plate then push the load lever down.

While closing the load plate, make sure the front edge of the load plate slides under the retention knob.

9. Press down the load lever and hook it under the retention tab.

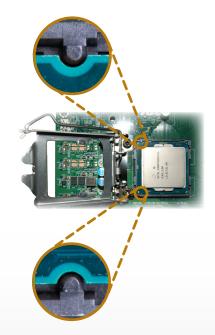

Important:

The CPU will fit in only one orientation and can easily be seated without exerting any force.

7-3.The CPU's notch will fit into the socket's alignment key when it's seated in the correct orientation.

► CPU

Installing the Fan and Heat Sink

The CPU must be kept cool by using a CPU fan with heat sink. Without sufficient air circulation across the CPU and heat sink, the CPU will overheat damaging both the CPU and system board.

1. Before you install the fan / heat sink, you must apply a thermal paste onto the top of

the CPU. The thermal paste is usually supplied when you purchase the fan / heat sink

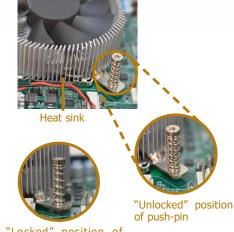

assembly. Do not spread the paste all over the surface. When you later place the heat

Some heat sinks come with a patch of pre-applied thermal paste. Do not apply thermal paste if the fan / heat sink already has a patch of thermal paste on its underside. Peel the strip that covers the paste before you place the fan / heat sink on top of the CPU.

Note: A boxed Intel® processor already includes the CPU fan and heat sink assembly. If your CPU was purchased separately, make sure to only use Intel®-certified fan and heat sink.

sink on top of the CPU, the compound will disperse evenly.

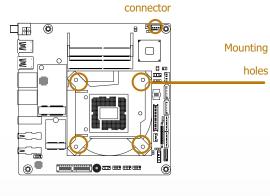

4. Screw tight two of the spring screws at opposite corners into the mounting holes. And then proceed with the other two spring screws.

"Locked" position of push-pin

5. Connect the CPU fan's cable to the CPU fan connector on the system board.

2. Place the heat sink on top of the CPU. The 4 spring screws around the heat sink, which are used to secure the heat sink onto the system board, must match the 4 mounting holes around the socket.

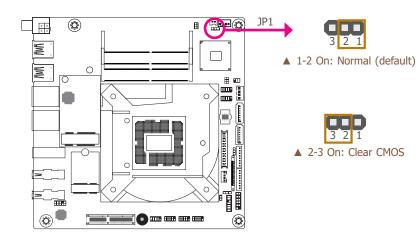

CPU fan

3. Orient the heat sink so that the CPU fan's cable is nearest the CPU fan connector.

► Jumper Settings

Clear CMOS

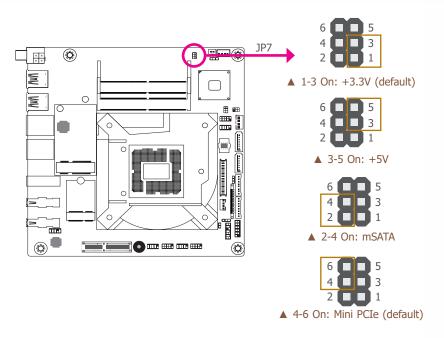

If any anomaly of the followings is encountered —

- a) CMOS data is corrupted;
- b) you forgot the supervisor or user password;
- c) failure to start the system due to BIOS mis-configuration

- it is suggested that the system be reconfigured with default values stored in the ROM BIOS. To load the default values stored in the ROM BIOS, please follow the steps below.

- 1. Power-off the system and unplug the power cord.
- 2. Put a jumper cap on JP1's pin 2 and pin 3. Wait for a few seconds and set JP1 back to its default setting, i.e. jumper cap on pin 1 and pin 2.
- 3. Plug the power cord and power-on the system.

Backlight Brightness Select

JP7 Pin 1/3/5 is used to select the power level of backlight brightness — +3.3V (default) or +5V. For CS101-Q370/C246 motherboards, JP7 Pin 2/4/6 is also used to select between Mini PCIe and mSATA signals.

Important:

Before powering-on the system, make sure that the backlight power settings of JP7 match the backlight power specification of the panel in use. Selecting the incorrect voltage will severely damage the backlight of your panel.

Note: Mini P

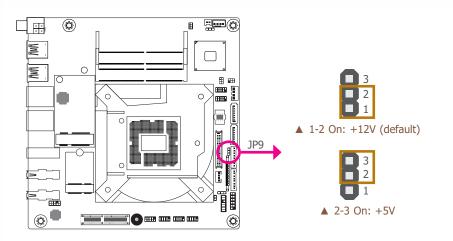

Mini PCIe signal is only supported by Q370/C246. H310 only supports mSATA.

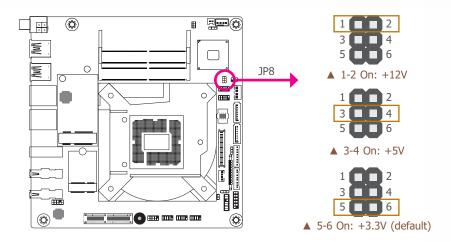

Jumper Settings

Panel Power Select

Jumper Settings

LCD/Inverter Power Select

JP9 is used to select the power level of LVDS LCD inverter connector.

JP8 is used to select the power supplied with the LCD panel.

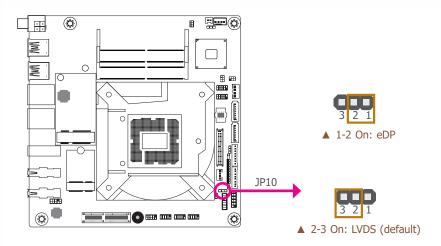

Important:

Before powering-on the system, make sure that the power settings of JP8 match the LCD panel's specification. Selecting the incorrect voltage will seriously damage the LCD panel.

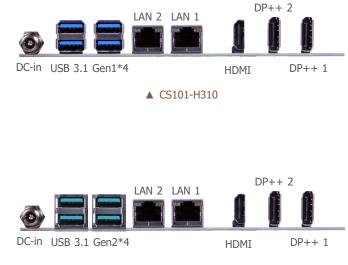

Jumper Settings

LVDS/eDP Signal Select

JP10 is used to select the LVDS/eDP signal.

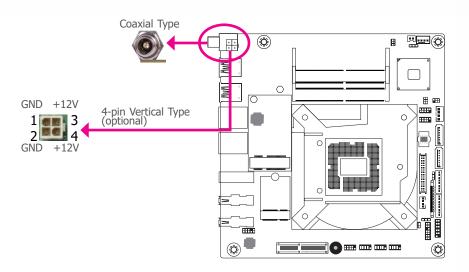

► Rear Panel I/O Ports

▲ CS101-Q370/C246

Rear Panel I/O Ports

12V DC-in

Connect a DC power cord to this jack. Use a power adapter with 12V DC output voltage. Using a voltage higher than the recommended one may fail to boot the system or cause damage to the system board.

Two types of DC-in jacks can be selected during procurement — coaxial (default) and 4-pin vertical type (optional) as shown below.

The rear panel I/O ports consist of the following:

- 1 DC-in
- 4 USB ports
 - CS101-Q370/C246: USB 3.1 Gen 2
 - CS101-H310: USB 3.1 Gen 1
- 2 RJ45 LAN ports
- 1 HDMI port
- 2 DP++ ports

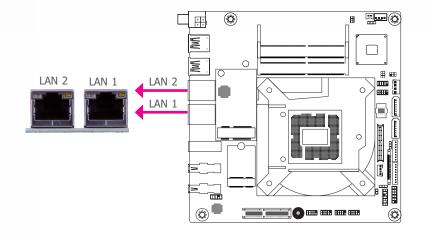

Ĩ

٢

DŪ

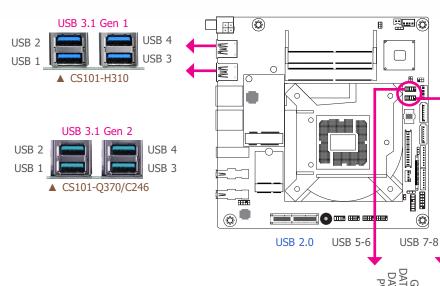

Rear Panel I/O Ports

RJ45 LAN Ports

Rear Panel I/O Ports

USB Ports

Features

CS101-H310 :

- Intel[®] I211AT PCIe
- Intel[®] I219V PCIe

CS101-Q370/C246

- Intel® I211AT PCIe
- Intel[®] I219LM PCIe

The two LAN ports allow the system board to connect to a local area network by means of a network hub.

BIOS Setting

Configure the onboard LAN ports in the Chipset menu ("PCH-IO Configuration" submenu) of the BIOS. Refer to the chapter 3 for more information.

Driver Installation

Install the LAN drivers. Refer to the chapter 4 for more information.

The USB device allows data exchange between your computer and a wide range of simultaneously accessible external Plug and Play peripherals.

The motherboard is equipped with 4 onboard USB Type A ports (USB 1-2/3-4) at the rear panel I/O ports. The four USB rear ports support USB 3.1 Gen 1 on CS101-H310, and USB 3.1 Gen 2 on CS101-Q370/C246. Two 10-pin USB internal connectors allow you to connect to 4 additional USB 2.0 ports (USB 5-6/7-8).

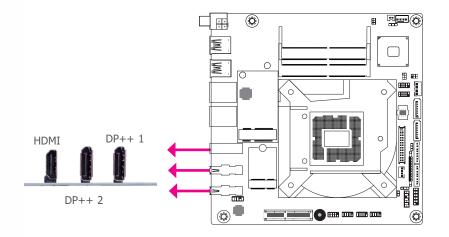

The additional USB ports may be mounted on a card-edge bracket. Install the card-edge bracket to an available slot on the system chassis and then insert the USB port cables to a connector.

Rear Panel I/O Ports

Graphics Interfaces

The system board contains three display ports -

- 1 HDMI port
- 2 DP++ ports

HDMI Port

The HDMI port which carries both digital audio and video signals is used to connect a LCD monitor or digital TV that has the HDMI port.

DP++ Port

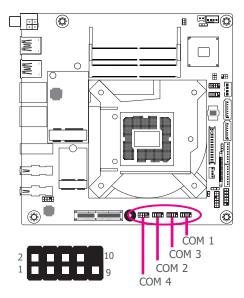

The DisplayPort is a digital display interface used to connect a display device such as a computer monitor. It is used to transmit audio and video simultaneously. The interface, which is developed by VESA, delivers higher performance features than any other digital interface.

Driver Installation

Install the graphics driver. Refer to the chapter 4 for more information.

► I/O Connectors

COM (Serial) Ports

The serial mode of COM 1 and COM 2 can be configured to RS232, RS422 and RS485 via BIOS, whereas the serial mode of COM 3 and COM 4 is fixed at RS232.

The serial ports are asynchronous communication ports with 16C550A-compatible UARTs that can be used with modems, serial printers, remote display terminals, and other serial devices.

Connecting External Serial Ports

Your COM port may come mounted on a card-edge bracket. Install the card-edge bracket to an available slot at the rear of the system chassis then insert the serial port cable to the COM connector. Make sure the colored stripe on the ribbon cable is aligned with pin 1 of the COM connector.

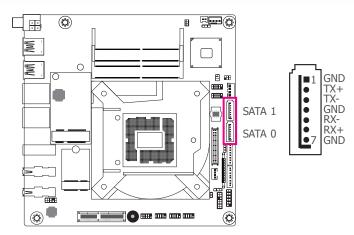

BIOS Setting

Configure the COM ports 1/2/3/4 in the Advanced menu ("NCT6116D Super IO Configuration" submenu) of the BIOS. Refer to the chapter 3 for more information.

▼ COM Port Pin Assignment

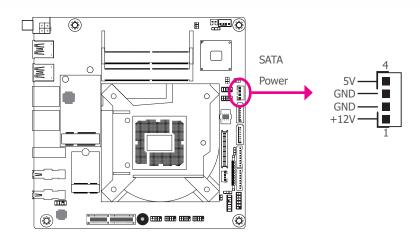

Pin	RS232	RS422 Full Duplex	RS485

SATA (Serial ATA) Connectors

Internal I/O Ports

SATA (Serial ATA) Power Connector

Features

- 2 Serial ATA 3.0 ports with data transfer rate up to 6Gb/s (SATA 0 and SATA 1)
- Integrated Advanced Host Controller Interface (AHCI) controller
- Supports RAID (for CS101-Q370/C246 only)

The Serial ATA connectors are used to connect Serial ATA devices. Connect one end of the Serial ATA data cable to a SATA connector and the other end to your Serial ATA device.

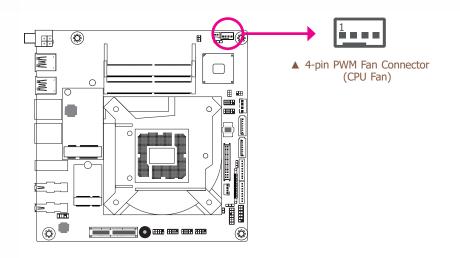

BIOS Setting

Configure the Serial ATA drives in the Chipset menu ("PCH-IO Configuration" > "SATA And RST Configuration") of the BIOS. Refer to the chapter 3 for more information.

The SATA power connector supplies power to the SATA drive. Connect one end of the provided power cable to the SATA power connector and the other end to your storage device.

BIOS Setting

Cooling Fan Connector

The fan connector is used to power a cooling fan. Cooling fans will provide adequate airflow throughout the chassis to prevent overheating the CPU and system board components. The 4-pin fans provide PWM to modulate fan speed.

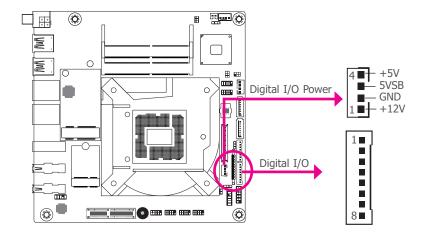

The 8-bit Digital I/O connector provides powering-on function to external devices that are connected to these connectors.

HDD-LED - Hard Disk Drive LED

Lighting of the LED indicates that the hard drive is being accessed.

RESET - Reset Switch

This switch allows you to reboot without having to power off the system.

PWR-LED - Power/Standby LED

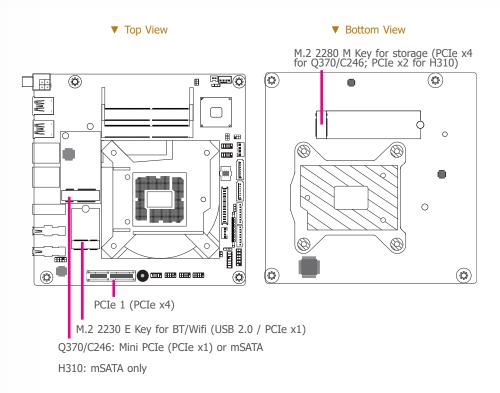

When the system's power is on, this LED will light up. When the system is in the S1 (POS - Power On Suspend) state, it will blink at 1-second intervals. When the system is in the S3 (STR - Suspend To RAM) state, it will blink at 4-second intervals.

ATX-SW - ATX Power Switch

This switch is used to power on or off the system.

Internal I/O Connectors

Expansion Slots

Mini PCI Express Slot

The full-size Mini PCIe socket supports the installation of a Mini PCIe card or an mSATA card. To switch between these two signals, use JP7. Refer to the "Jumper Settings" section for more information.

M.2 Sockets

The M.2 socket is the Next Generation Form Factor (NGFF) which is designed to support multiple modules and make the M.2 more suitable in application for solid-state storage. A 22x30mm socket and standoff is reserved on the PCB for a M.2 E Key module, and a 22x80mm socket and standoff for a M.2 M Key module.

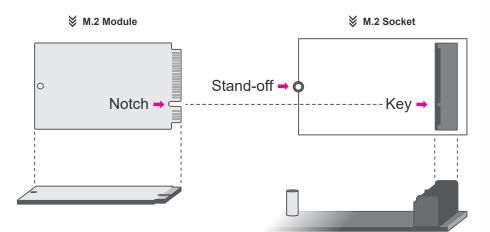

PCI Express x4 Slot

Install PCI Express cards such as network cards or other cards that comply to the PCI Express specifications into the PCI Express x4 slot.

Internal I/O Ports Expansion Slots Installing the M.2 Module

Before installing the M.2 module into the M.2 socket, please make sure that the following safety cautions are well-attended.

- 1. Make sure the PC and all other peripheral devices connected to it has been powered down.
- 2. Disconnect all power cords and cables.
- 3. Locate the M.2 socket on the system board
- 4. Make sure the notch on card is aligned to the key on the socket.
- 5. Make sure the standoff screw is removed from the standoff.

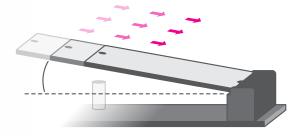

► Internal I/O Connectors ► Expansion Slots

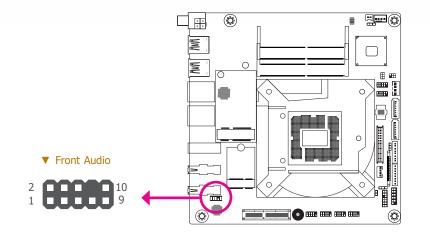

Internal I/O Ports

Front Audio Connector

Please follow the steps below to install the card into the socket.

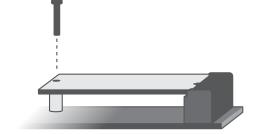

Step 1: Insert the card into the socket at an angle while making sure the notch and key are perfectly aligned.

Step 2:

Press the end of the card far from the socket down until against the stand-off.

Step 3:

Screw tight the card onto the stand-off with a screw driver and a stand-off screw until the gap between the card and the stand-off closes up. The card should be lying parallel to the board when it's correctly mounted.

Battery

battery connector

The lithium ion battery addendum supplies power to the real-time clock and CMOS memory as an auxiliary source of power when the main power is shut off.

Safety Measures

- There exists explosion hazard if the battery is incorrectly installed.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to local ordinances.

Chapter 3 - BIOS Setup

► Overview

The BIOS is a program that takes care of the basic level of communication between the CPU and peripherals. It contains codes for various advanced features found in this system board. The BIOS allows you to configure the system and save the configuration in a battery-backed CMOS so that the data retains even when the power is off. In general, the information stored in the CMOS RAM of the EEPROM will stay unchanged unless a configuration change has been made such as a hard drive replaced or a device added.

It is possible that the CMOS battery will fail causing CMOS data loss. If this happens, you need to install a new CMOS battery and reconfigure the BIOS settings.

Note:

The BIOS is constantly updated to improve the performance of the system board; therefore the BIOS screens in this chapter may not appear the same as the actual one. These screens are for reference purpose only.

Default Configuration

Most of the configuration settings are either predefined according to the Load Optimal Defaults settings which are stored in the BIOS or are automatically detected and configured without requiring any actions. There are a few settings that you may need to change depending on your system configuration.

Entering the BIOS Setup Utility

The BIOS Setup Utility can only be operated from the keyboard and all commands are keyboard commands. The commands are available at the right side of each setup screen.

The BIOS Setup Utility does not require an operating system to run. After you power up the system, the BIOS message appears on the screen and the memory count begins. After the memory test, the message "Press DEL to run setup" will appear on the screen. If the message disappears before you respond, restart the system or press the "Reset" button. You may also restart the system by pressing the <Ctrl> <Alt> and keys simultaneously.

Legends

Wake system from S5

When Enabled, the system will automatically power up at a designated time every day from the Real-time clock (RTC) battery. More settings will be displayed once it's switched to [Enabled] as detailed in the next page.

State After G3

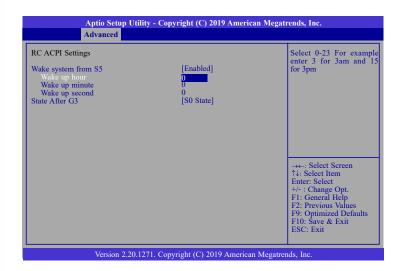

Select between S0 State, Last State, and S5 State. This field is used to specify what state the system is set to return to when power is re-applied after a power failure (G3 state).

When "Wake system from S5" is enabled, the following fields will appear.

Wake up hour

Press +/- to set the hour from 0 to 23.

Wake up minute

Press +/- to set the minute from 0 to 59.

Wake up second

Press +/- to set the second from 0 to 59.

Intel (VMX) Virtualization Technology

When this field is enabled, the VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

Active Processor Cores

Select number of cores to be enabled in each processor package: all, 1, 2, 3, 4 or 5.

Hyper-threading

Enable or disable Hyper-threading. When it is enabled, a physical core will perform as two logical processors, and the user may experience better computational efficiency of the system. Please make sure that the OS operating on your system is optimized for Hyper-Threading, e.g. Windows and Linux. This field is not available when the equipped CPU does not support Hyper-threading.

Advanced

Power & Performance

Configure the power and performance settings in this page.

Setup Prompt Timeout

Set the number of seconds to wait for the setup activation key. 65535 (0xFFFF) denotes indefinite waiting.

Bootup NumLock State

Select the keyboard NumLock state: On or Off.

Quiet Boot

This section is used to enable or disable quiet boot option.

Boot Option Priorities

Select the system boot order.

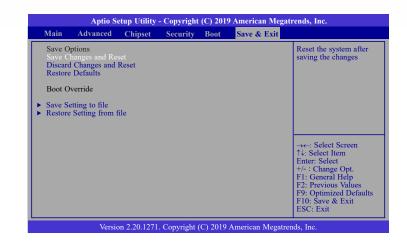

BGRT Logo

It is used to enable or disable to support display logo with ACPI BGRT table.

Driver Option Priorities

Select the driver boot order.

Save & Exit

Save Changes and Reset

To save the changes, select this field and then press <Enter>. A dialog box will appear. Select Yes to reset the system after saving all changes made.

Discard Changes and Reset

To discard the changes, select this field and then press <Enter>. A dialog box will appear. Select Yes to reset the system setup without saving any changes.

Restore Defaults

To restore and load the optimized default values, select this field and then press <Enter>. A dialog box will appear. Select Yes to restore the default values of all the setup options.

Boot Override

Move the cursor to an available boot device and press Enter, and then the system will immediately boot from the boot device. The Boot Override function will only be effective for the current boot. The "Boot Option Priorities" configured in the Boot menu will not be changed.

Save Setting to file

Select this option to save BIOS configuration settings to a USB flash device.

Restore Setting from file

This field will appear only when a USB flash device is detected. Select this field to

restore setting from the USB flash device.

► Updating the BIOS

To update the BIOS, you will need the new BIOS file and a flash utility. Please contact technical support or your sales representative for the files. You may refer to the how-to video "How to update AMI BIOS in UEFI mode on DFI products?" at <u>https://www.dfi.com/Knowledge/ Video/5</u> for updating the BIOS steps.

► Notice: BIOS SPI ROM

1. The Intel[®] Management Engine has already been integrated into this system board. Due to

the safety concerns, the BIOS (SPI ROM) chip cannot be removed from this system board and used on another system board of the same model.

2. The BIOS (SPI ROM) on this system board must be the original equipment from the factory and cannot be used to replace one which has been utilized on other system boards.

3. If you do not follow the methods above, the Intel® Management Engine will not be updated and will cease to be effective.

Note: a. You can take advantage of flash tools to update the default configuration of the BIOS (SPI ROM) to the latest version anytime.

b. When the BIOS IC needs to be replaced, you have to populate it properly onto the system board after the EEPROM programmer has been burned and follow the technical person's instructions to confirm that the MAC address should be burned or not.

Chapter 4 - RAID

The system board allows configuring RAID on Serial ATA drives. It supports RAID 0, RAID 1, RAID 5 and RAID 10.

RAID Levels

RAID 0 (Striped Disk Array without Fault Tolerance)

RAID 0 uses two new identical hard disk drives to read and write data in parallel, interleaved stacks. Data is divided into stripes and each stripe is written alternately between two disk drives. This improves the I/O performance of the drives at different channel; however it is not fault tolerant. A failed disk will result in data loss in the disk array.

RAID 1 (Mirroring Disk Array with Fault Tolerance)

RAID 1 copies and maintains an identical image of the data from one drive to the other drive. If a drive fails to function, the disk array management software directs all applications to the other drive since it contains a complete copy of the drive's data. This enhances data protection and increases fault tolerance to the entire system. Use two new drives or an existing drive and a new drive but the size of the new drive must be the same or larger than the existing drive.

RAID 5

RAID 5 stripes data and parity information across hard drives. It is fault tolerant and provides better hard drive performance and more storage capacity.

RAID 10 (Mirroring and Striping)

RAID 10 is a combination of data striping and data mirroring providing the benefits of both RAID 0 and RAID 1. Use four new drives or an existing drive and three new drives for this configuration.

RAID Level	Min. Drives	Protection	Description
RAID 0	2	None	Data striping without redundancy
RAID 1	2	Single Drive Failure	Disk mirroring
RAID 5	3	Single Drive Failure	Block-level data striping with distributed parity
RAID 10	4	1 Disk Per Mirrored Stripe (not same mirror)	Combination of RAID 0 (data striping) and RAID 1 (mirroring)

Note:

M.2 PCIe SSD cannot be used to set up a RAID set either with an M.2 SATA SSD or a SATA hard drive.

Settings

To enable the RAID function, the steps below are required and elaborated in following sections.

- 1. Connect the Serial ATA drives.
- 2. Enable RAID in the AMI BIOS.
- 3. Create a RAID volume.
- 4. Install the Intel Rapid Storage Technology Utility.

Step 1: Connect the Serial ATA Drives

Important:

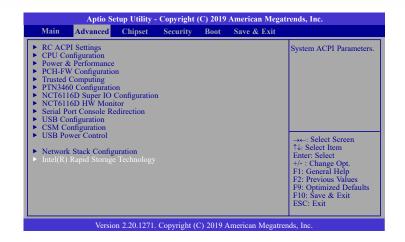

- 1. Make sure you have installed the Serial ATA drives and connected the data cables otherwise you won't be able to enter the RAID BIOS utility.
- 2. Treat the cables with extreme caution especially while creating RAID. A damaged cable will ruin the entire installation process and operating system. The system will not boot and you will lost all data in the hard drives. Please give special attention to this warning because there is no way of recovering back the data.

Step 2: Enable RAID in the AMI BIOS

- 1. Power-on the system then press to enter the main menu of the AMI BIOS.
- 2. Go to "Chipset" menu and select the "PCH-IO Configuration" menu then "SATA And RST Configuration" menu.
- 3. Change the "SATA Mode Selection" to "Intel RST Premium With Intel Optane System Acceleration" mode.
- 4. Press F10 to save the changes.
- 5. Reboot the system.

Step 3: Create a RAID Volume

1. Go to the "Advanced" menu of the AMI BIOS and select "Intel(R) Rapid Storage Technology".

- 2. The screen displays all available drives. Select "Create RAID volume" to create a RAID volume".
- 3. Use the up or down arrow keys to select the RAID level and press <Enter>.
- 4. Use the up or down arrow keys to scroll through the list of hard drives and press <Enter> to select the drive.
- 5. Press <Enter>.
- 6. Use the up or down arrow keys to select the strip size and press <Enter>.
- 7. Enter the volume size and press <Enter>.
- 8. At the prompt, press $\langle Y \rangle$ to confirm volume creation.

Step 4: Install the Intel Rapid Storage Technology Utility

The Intel Rapid Storage Technology Utility can be installed from within Windows. It allows RAID volume management (create, delete, migrate) from within the operating system. It will also display useful SATA device and RAID volume information. The user interface, tray icon service and monitor service allow you to monitor the current status of the RAID volume and/ or SATA drives. It enables enhanced performance and power management for the storage subsystem.

Chapter 5 - Supported Software

Please insert the DVD-ROM into your optical drive to install drivers, utilities and software applications required to enhance the performance of the system board. You may also acquire your software from your sales representatives or from the website download page at https://www. dfi.com/DownloadCenter.

► Auto-run Menu

After inserting your DVD-ROM into your optical drive, the System Utility auto-run menu may pop up. Click on the utility or driver that is to be installed on the system. Please refer to the following sections that correspond to your selection for more information.

System Utility	×
Model Name CS101	Intel Chipset Software Installation Utility Intel HD Graphics Drivers Realtek Audio Drivers Intel LAN Drivers Intel ME Drivers (Consumer) Intel ME Drivers (Corporate) Intel Rapid Storage Technology Drivers Intel Serial IO Drivers Adobe Acrobat Reader 9.3
	User's Manual (C246/Q370) More >>
	Exit

Click "More >>" on the lower right to view go to the next page of the auto-run menu, and click "<< Previous" to return to the previous menu.

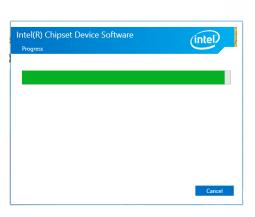

► Intel Chipset Software Installation Utility

The Intel Chipset Software Installation Utility is used for updating Windows[®] INF files so that the Intel chipset can be recognized and configured properly in the system.

3. Go through the readme document for more installation tips then click "Install".

Back Accept Cancel

► Intel HD Graphics Drivers

 Setup is now ready to install the graphics driver. Click "Next".

By default, the "Automatically run WinSAT and enable the Windows Aero desktop theme" is enabled. With this enabled, after installing the graphics driver and the system rebooted, the screen will turn blank for 1 to 2 minutes (while WinSAT is running) before the Windows 10 desktop appears. The "blank screen" period is the time Windows is testing the graphics performance.

We recommend that you skip this process by disabling this function then click "Next".

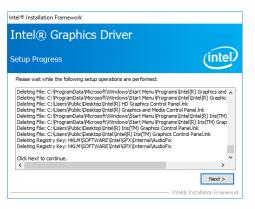

2. Read the license agreement then click "Yes".

 Go through the readme document for system requirements and installation tips then click "Next".

Chapter 6 - Intel AMT Settings

► Overview

Intel Active Management Technology (Intel[®] AMT) combines hardware and software solution to provide maximum system defense and protection to networked systems.

The hardware and software information are stored in non-volatile memory. With its built-in manageability and latest security applications, Intel® AMT provides the following functions.

Discover

Allows remote access and management of networked systems even while PCs are powered off; significantly reducing desk-side visits.

Repair

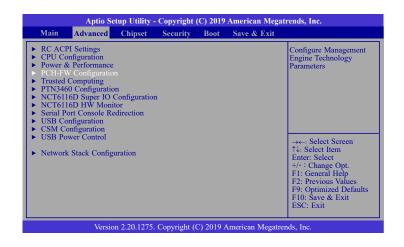

Remotely repair systems after OS failures. Alerting and event logging help detect problems quickly to reduce downtime.

Protect

Intel AMT's System Defense capability remotely updates all systems with the latest security software. It protects the network from threats at the source by proactively blocking incoming threats, reactively containing infected clients before they impact the network, and proactively alerting when critical software agents are removed.

Enable Intel® AMT in the AMI BIOS

- 1. Power-on the system then press to enter the main menu of the AMI BIOS.
- 2. In the Advanced menu, select PCH-FW Configuration.

3. Select Enabled in the AMT BIOS Features field.
